

## GENERAL DESCRIPTION

The SP336E is a monolithic serial multi-transceiver device that contains both RS-232 and RS-485/RS-422 line drivers and receivers. The configuration of the SP336E can be reconfigured into eight operating modes including RS-232 only (4TX/4RX), RS-485/RS-422 only (2TX/2RX) full or half duplex, two RS-232/RS-485 mixed modes, two shutdown modes and a diagnostic loop-back mode. Modes may be selected at any time by changing the logic state of the three MODE pins. The device can implement a dual-mode serial port, mixed mode ports or as an interface signal translator. The Exar charge pumps deliver true RS-232 driver output voltages from a single power supply at either 3.3V or 5V. The SP336E requires only four 0.1 $\mu$ F capacitors for charge pump. A slew rate control pin configures driver outputs for either high data rate or slew-controlled data rates. Slew-controlled outputs minimize problems with reflections and ringing on long or un-terminated cables. All RS-485 receivers or transceivers feature high impedance which allow up to 256 transceivers on a shared bus. When configured in RS-485/RS-422 mode, each driver may be individually enabled or put into tri-state, simplifying use on shared buses or bidirectional communication. All receivers have advanced failsafe protection to prevent oscillation when inputs are un-connected. In RS-232 mode each receiver input has a 5k ohm pull-down to ground. Differential Receivers will default to output logic 1 if inputs are floating, shorted or open but terminated. All driver outputs and receiver inputs are protected against ESD strikes up to +/-15,000 volts.

## FEATURES

- 3.3V or 5V Single Supply Operation
- Robust +/-15kV ESD Protection (IEC 61000-4-2 Air Gap)
- Software Selectable Mode Selection
- Up to 4 Drivers, 4 Receivers RS-232/V.28
- Up to 2 Drivers, 2 Receivers RS-485/RS-422
  - Full or Half Duplex Configurations
  - 1/8th Unit Load, up to 256 receivers on bus
- Mixed RS-232/RS-485 modes
- Pin Programmable Slew Rate for Reduced EMI
- RS-485 Advanced Failsafe on Open, Short or Terminated Lines
- Diagnostic Loop-Back Function
- 28 Pin SOIC or TSSOP Packaging

## TYPICAL APPLICATIONS

- Factory Automation Equipment
- Security Networks
- Industrial/Process Control Networks
- Point-Of-Sales Equipment
- Gaming Machines
- Serial Protocol Translators (ex. RS-232 to RS-485/RS-422)
- Embedded Industrial PC's
- Building Environmental Control Systems (ex. HVAC)
- Cable Repeaters / Port Extenders / Hubs

	DRIVERS AT HIGH IMPEDANCE	4T/2R RS-485 & 2R RS-232
MODE (M0, M1, M2)	110	100
		

## ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections to the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability and cause permanent damage to the device.

Supply Voltage $V_{CC}$	+6.0V
Receiver Input $V_{IN}$ (DC Input Voltage)	-15V to +15V
Input Voltage at TTL input Pins	-0.3V to $V_{CC} + 0.5V$
Driver Output Voltage (from Ground)	-7.5V to +12.5V
Short Circuit Duration, TXout to GND	Continuous
Storage Temperature Range	-65°C to +150°C
Lead Temperature (soldering, 10s)	+300°C
Power Dissipation 28-pin SOIC-W (derate 17mW/°C above +70°C)	938mW
Power Dissipation 28-pin TSSOP (derate 12mW/°C above +70°C)	657mW

### CAUTION:

ESD (Electrostatic Discharge) sensitive device. Permanent damage may occur on unconnected devices subject to high energy electrostatic fields. Unused devices must be stored in conductive foam or shunts. Personnel should be properly grounded prior to handling this device. The protective foam should be discharged to the destination socket before devices are removed.

**1.0 FUNCTION TABLES**

The SP336E drivers and receivers may be configured to operate as either standard RS-485/RS-422 or RS-232 devices. RS-485/RS422 drivers have differential outputs and receivers have differential inputs. RS-232 drivers and receivers are single-ended with inverting outputs.

**2.0 SUGGESTED APPLICATION DIAGRAMS**

The SP336E supports all signals used in RS-232 over an 8 pin modular jack (RJ-45) as defined in TIA/EIA-561. For DTE serial port only three drivers are required. Driver\_1 is not used in this configuration and its driver input should be tied to high or low.

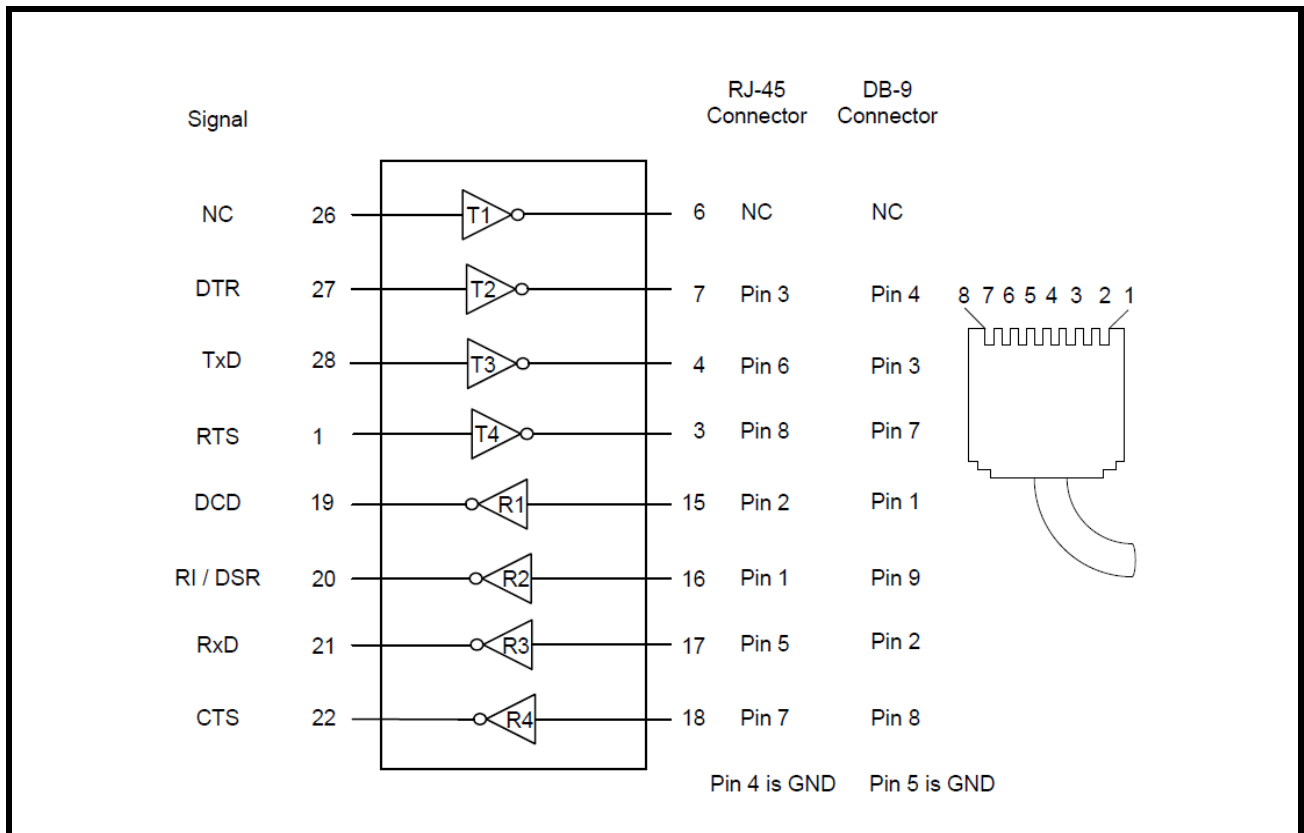

SP336E may also be used to implement a standard serial port over a DB-9 connector (TIA/EIA-574 or the standard IBM serial port). In that case either DSR or RI signal can be supported. Both DSR and RI are used mainly for dial-up connections and are typically not needed on dedicated lines. If both signals are required, add a discrete transceiver such as SP3220E.

An alternative implementation would be to use the SP336E to emulate the functionality of two dual-channel RS-232 transceivers (2 x SP232's or equivalent).

**Loop-Back**

Changing from RS-232 mode (MODE 001) to loop-back mode (MODE 000) duplicates the function of an external loop-back plug. Loop-back can be used to test serial port functionality or to diagnose faults.

**FIGURE 24. RS-232E SERIAL PORT (EIA-561 / EIA-574)**

**RS-232 to RS-485 Translator**

SP336E can be used to implement a single-chip RS-232 to RS-485 translator function. Both full-duplex (4-wire RS-485) and half-duplex (2-wire RS-485) configurations are shown. RS-485 is capable of communicating on data cables up to 4000 feet (1200 meter) which makes it an ideal interface for extending the reach of short-range serial ports like RS-232. The configurations shown can be used to connect directly to existing PC type RS-232 serial ports to enable extended-reach communication.

The RTS signal (circuit CA or 105) is used as a transmit direction control signal for half-duplex. The ON condition puts the repeater into transmit mode and inhibits receive. On a half-duplex channel RxD should be held in MARK state (binary 1) when receiver 3 is inactive. Driver 1 on the SP336E can be used to generate DSR or CTS signal to indicate to the host terminal that the translator is powered-on and ready.

**Shutdown Modes**

SP336E features two shutdown modes. In mode 111 (full shutdown) all drivers and receivers are at high impedance. In mode 110, all drivers are tri-state but all four receivers remain active. In modes 101 and 100 two differential receivers can be kept active while the differential drivers are tri-stated using the Tx\_EN inputs.

**FIGURE 25. RS-232 / RS-485 TRANSLATOR FULL-DUPLEX CABLE-EXTENDER (MODE 011)**

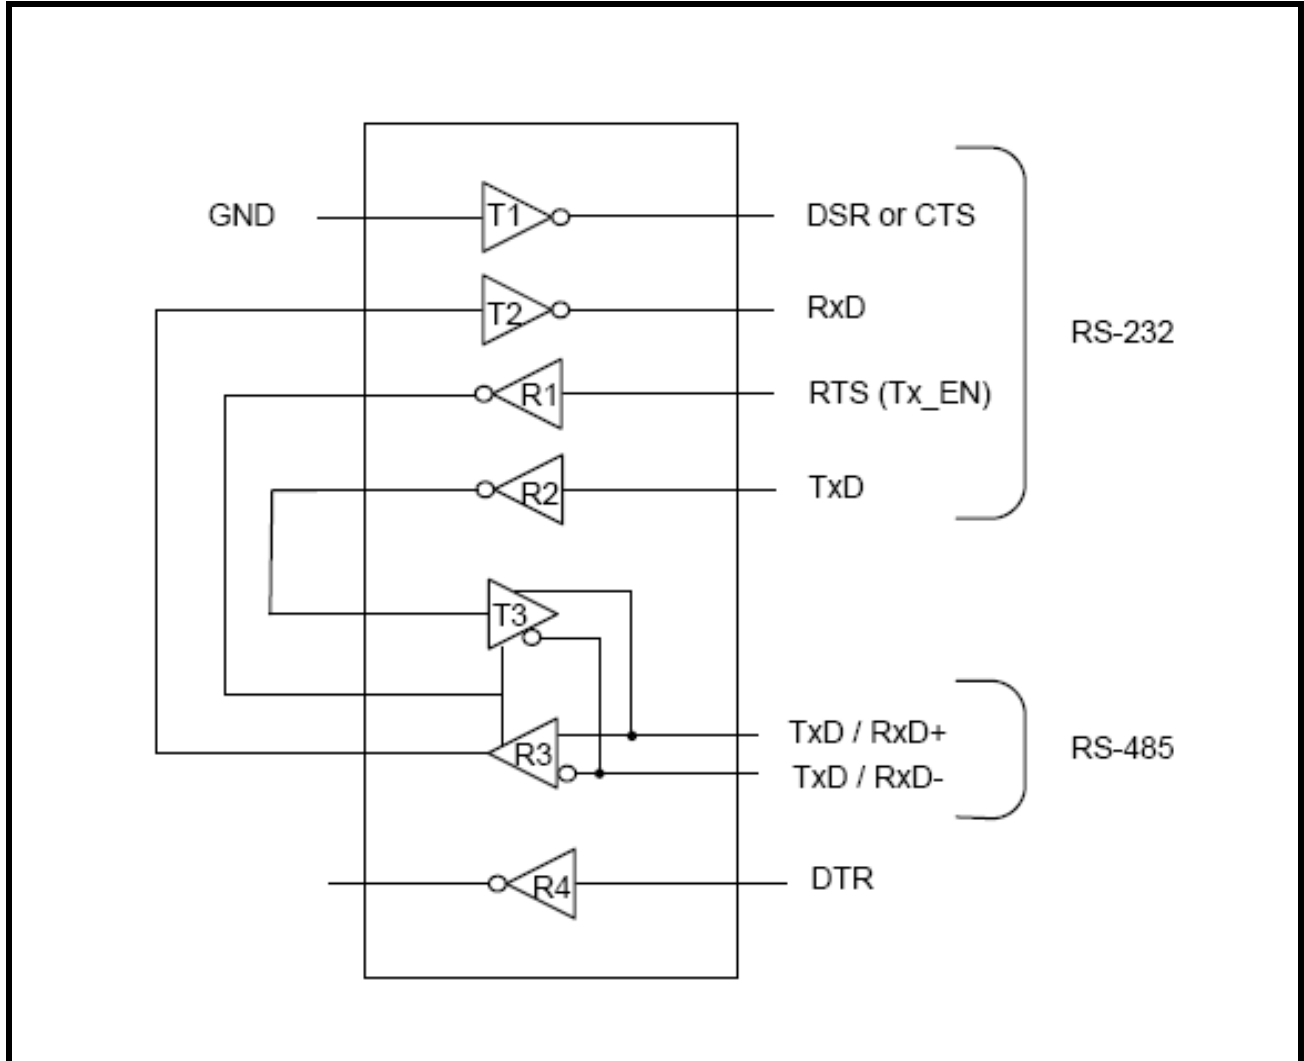

FIGURE 26. RS-232 / RS-485 TRANSLATOR HALF-DUPLEX CABLE-EXTENDER (MODE 010)

**Bus Repeater**

Mode 101 can be used as a bus-repeater to extend the reach of an RS-422 bus. This configuration is best suited for point-to-point or multi-drop communications because the drivers are always active and echoing data from their corresponding receiver.

For applications where multiple nodes are allowed to transmit, some type of bus arbitration should be used. One technique would be to use SP336E in conjunction with external decoder logic, packet buffers and node address fields embedded in the data stream. Receiving the correct node address triggers Tx\_EN to pass data onward.

Mode 100 could implement a repeater / gateway to partition or extend RS-485 networks. Direction Control determines when data is forwarded to or from segments A and B.

March 2010	1.0.0	Production Release.

**NOTICE**

EXAR Corporation reserves the right to make changes to the products contained in this publication in order to improve design, performance or reliability. EXAR Corporation assumes no responsibility for the use of any circuits described herein, conveys no license under any patent or other right, and makes no representation that the circuits are free of patent infringement. Charts and schedules contained here in are only for illustration purposes and may vary depending upon a user's specific application. While the information in this publication has been carefully checked; no responsibility, however, is assumed for inaccuracies.

EXAR Corporation does not recommend the use of any of its products in life support applications where the failure or malfunction of the product can reasonably be expected to cause failure of the life support system or to significantly affect its safety or effectiveness. Products are not authorized for use in such applications unless EXAR Corporation receives, in writing, assurances to its satisfaction that: (a) the risk of injury or damage has been minimized; (b) the user assumes all such risks; (c) potential liability of EXAR Corporation is adequately protected under the circumstances.
